

M. Raihan Rafiiful Allaam

Product Designer — enterprise SaaS, e-commerce & AI-augmented design workflows

Cibadak, Sukabumi, Indonesia · raihanr@gmail.com · 0857-7971-8640 · Portfolio: alamehan.github.io/ · LinkedIn: www.linkedin.com/in/raihanr · GitHub: github.com/alamehan

SUMMARY

- Product Designer with 5+ years across enterprise SaaS platforms, e-commerce ecosystems, corporate web properties, and AI-augmented design workflows — 40+ products and platforms shipped, from research and user flows to design systems, interactive prototypes, and design-to-development handoff.
- Sole product designer for PT Elabram Systems' hiring-solutions ecosystem: 13 platforms & products designed end-to-end, with the company's design system architected from scratch and evolved into a machine-readable engine for AI-assisted delivery.
- A practice in three phases: Raw UI → Design System (70+ hand-crafted components, fully synced foundations) → AI Generates UI (one JSON design system powering both Figma generation and frontend code) — "the design system becomes the engine, not just the reference."
- 200+ centrally documented flows and prototypes across 30+ modules; 11 product lines and 600+ pages at Codify; 3 freelance engagements; 5 original AI-design methodologies; 20 self-authored products on one shared standard.
- 🏆 2nd Winner — AIDEA 2026, the company-wide AI innovation competition at PT Elabram Systems.

WORK EXPERIENCE

UI/UX Designer (Product Design) — Full Time, Hybrid — PT Elabram Systems

Sep 2023 — now · Jakarta Pusat

- Sole product designer for the hiring-solutions ecosystem — 13 platforms & products end-to-end (E-Systems, The New E-Systems, E-Staff, E-Hire web & mobile, E-Jobs web & mobile, Resource Portal, Axdif, Payroll Report Dashboard, Elabram.com, Elnex, MCCI), plus brand & campaign design — spanning research, user flows, wireframes, hi-fi mockups, interactive prototypes, and design-to-development handoff.
- E-Systems foundations: contract-module flow matched to the real business process; job & applicant recommendation; Data Export/Import simplified and extended with Data Merge; the CRM menu (16 documented flows), Improve Jobs (12), Interview Schedule (17); a boolean-search advanced filter with guided filter-first browsing (iterated V1–V5); an Agreement module reframed around five pillars (overview, flow visualization, flexible navigation, activity log, collaboration) — presented to Business Development & Legal and approved; plus cross-platform refinements from the Document Builder to candidate cards and Jobs-page toasts.
- Contract Approval with e-materai, evolved through UAT cycles into 45 documented flows — KAM/HOD approvals, online & offline signing, bulk approve/reject/sign, auto-sign, scheduled and post-hire survey emails (3 & 30 days), a responsive candidate-signature stage, and the end-to-end Contract Correction workflow: a fully transparent revision history, culminating in a 25-step Contract History prototype.
- Candidate module: Resume Builder (11 flows incl. custom templates, a template library, and Send CV to Client), Consent Management with clear statuses (8 flows + consent-restriction modals), Candidate History, Get Contact across 3 data cases, an AI Profile Summary (iterated twice, archived for newer AI features), a meticulously iterated comment experience (25 features in 3 flow groups), and soft-linked profiles syncing E-Systems with E-Hire.
- Platform-wide systems: a module-based Notification Center revamp, a unified email-template set, admin-configurable Maintenance Mode, six report modules redesigned, a responsive login page with seasonal event banners, File & Asset Management (incl. a white-label AMS demo flow), Master Data/HRIS user management (6 flows), and Invoice Review (7 approver flows).
- AI-powered features across Candidates and Jobs: suggestions, quick actions, top picks, customizable prompts; the AI Assistant and Smart Writer re-engineered to Google-Docs-style interactions; detailed Error Modals; and Compact View + Keep-In-View pipelines — sharper recruiter focus, accelerated candidate profiling.

- Ongoing: a Recruitment Intelligence Master Data Dictionary synced to the design system, bulk assign-to-recruiter, a 4-type advanced-filter UX with insight views, new table-UI concepts, the Pre-boarding prototype, and N-level module diagrams for Contract & Pre-Boarding.
- The design system, V1 → V2 → AI-ready: 70+ hand-crafted components fully synced to foundations (tiers: Atomic → Basic → Advanced → Panel Content, plus prototype-purpose components, master data, and animated GIF illustrations), slot-based variants without break/detach for a 100% synced system, converted to machine-readable JSON powering both Figma generation and frontend code, with a Figma plugin in development — "the design system becomes the engine, not just the reference."
- E-Staff, the client portal: a minimalist comment feature, a dedicated interview-schedule prototype, Employee History synced from E-Systems for one cross-product experience, and Forgot Password.
- E-Hire, redesigned end-to-end: a new design system and functional prototype with built-in product tours; a researched green brand (20 reference apps distilled), a QR-motif logo and a robot mascot; feature design from applicant comparison to bulk interviews; and a WhatsApp Bot apply/follow-up channel launched with the core app. E-Hire Mobile brought QR-based hiring (squirrel, glassmorphism, progressive blur) that accelerated retail hiring.
- E-Jobs: the AI chatbot experience — profile completion, application tracking, applying, and recommendations in conversation (10 flows) plus Job Recommendation (8 flows) on web; the mobile app redesigned to a clean, minimalist, mobile-first UX with 20+ toasts to PO spec.
- Resource Portal (9 flows — contracts, assets, payslips on mobile web) with its companion Resource module in E-Systems; and the Payroll Report Dashboard for compensation tracking.
- Corporate web: Axdif landing pages V1 → V2 and beyond (HRIS, AI, pricing, blog, mega menu — responsive throughout, built with Marketing); Elabram.com recreated fully responsive with 4 new AI service pages, complete company pages, and UX fixes down to the cookie banner; the Elnex homepage with SVG service animations and an AI Motion System; and the MCCI custom-platform design replacing a restrictive third-party stack.
- Brand & campaign: the E-Systems features banner and seasonal login banners (Chinese New Year, Isra Mi'raj, Idul Fitri, Nyepi, Waisak, Kenaikan Yesus Kristus, Idul Adha) that improved event awareness.
- Design ops & collaboration: one master documentation sheet holding 200+ flows across 30+ modules (dramatically faster asset retrieval), DESIGN.md coding-phase standards, weekly design updates, PO & sprint rituals, structured stakeholder walkthroughs, and the internal AI Sharing Sessions — initiated and led for the development team.
- Recorded impact: faster approvals with less friction, timely automated candidate feedback, a navigable notification center, consistent cross-system data, sharper recruiter focus through AI adoption, and one cohesive experience across the ecosystem.

UI/UX Designer — Full Time, Remote — PT Kreasi Kode Digital (Codify), a SURGE subsidiary

Dec 2021 — Apr 2023 · Malang

- 11 product lines, 600+ designed pages across a social-commerce and super-app ecosystem — research, design, and prototyping.
- LiniStore, a fully-responsive social-commerce platform with group buying (200+ pages), and LiniSeller, its seller-side storefront builder (100+ pages), end to end.
- The Kelola Super App family: Gudang e-commerce fulfillment (120+ pages), Gudang Staff (70+), Paket package delivery (50+), Iklan media-bidding (70+), the Bayar payment-gateway widget, and the Gudang Portal report module.
- Promotional landing pages for Kelola Super App and Kelola Gudang; built and maintained two design systems (LiniStore & Kelola Super App).
- Led the Kelola Super App rebranding — the master logo plus logos for every Kelola service, with digital assets and brand guidelines for each.

FREELANCE & CLIENTS

Product Designer — AI onboarding chat experience — Linden AI (international, remote)

Jul — Aug 2025

- The brief: a calm, single-screen AI onboarding chat — empathetic conversation, smart free-text parsing, lightweight photo uploads, and a signature side deck of profile cards sliding in as real-time progress ("Apple-meets-Notion-meets-AI").
- Quoted \$250 for the full concept, scoped to \$120 for two states — then delivered a complete interactive prototype including a 3D character, beyond the agreed scope.
- The client chose a different product direction but praised the quality, paid in full, and offered a \$500/month retainer for continued collaboration.

Web Designer & Developer — ICHEC 2022–2024 — Indonesia Chemical Engineering Challenge · Institut Teknologi Bandung

Aug 2021 — Oct 2023

- Crafted fully-responsive interfaces for three annual event websites, then built and managed all three end to end.

Web Designer & Developer — AISC 2023 — AIChE Indonesia Student Conference · Universitas Pertamina

Mar — Jun 2023

- Designed, built, and managed the fully-responsive conference website for seamless access to event details.

AWARDS

2nd Winner — AIDEA 2026 (company-wide AI innovation competition) — PT Elabram Systems

May — Jun 2026

- "Aldea to Action" — Elabram's company-wide AI innovation campaign (IDR 30,000,000 prize pool); entered as Group 6 with Riyan Trisna Wibowo and took 2nd place (IDR 7,000,000) for a "highly creative and feasible AI solution."
- The idea: DealCraft AI — a guided, Notion-like legal-negotiation workspace embedded in E-Systems, walking Business Development and Legal through Business Context → Legal Draft → Risk Scan → Client Feedback → Negotiated Revision → Signed Contract → Deal Closed.
- AI composes business context, drafts or ingests legal documents, scans for gaps and risky clauses, analyzes multi-channel client feedback (text, email, WhatsApp screenshots, document markups), and generates revisions along a strategic slider (protective · balanced · accommodating) — with a Git-like diff view, executive impact summaries, and ready-to-send replies.
- Deliverables: a full self-contained HTML demo (12-stage guided wizard, adaptive split panes, two-way editor/preview sync, zero-disabled interactivity, a technical state machine) specified in a complete PRD, plus final decks in English and Indonesian.
- Shortlisted Top 5 → final pitch to Top Management → 2nd Winner, announced company-wide; later cited in the internal Sprint Review as a lesson in UX discipline — after ~10 iterations the flow became properly simple.

KNOWLEDGE SHARING

Sharing session — "Design as Data Compression" — PT Elabram Systems, company-wide

- An original metaphor for design's business value: machines run on terabytes, humans on ~1 GB of biological RAM — thick reports are a 600 MB tangled ball that overloads any human audience; good design compresses it into a tidy 50 MB cube, freeing the audience's capacity for the decision itself.
- Core thesis: "Our job is not to force audiences to enlarge their brain capacity, but to compress our message so it fits in human RAM."

AI Showcase — "The Cinematic Architect" — PT Elabram Systems

- A 27-page showcase of six original workflow systems, each documented with problem, solution, and reported impact: Dianimate (cinematic diagram animation, ~4 h → ~2 min, roadmap approval ~3 weeks → ~4 days), Phantom Flow (living prototypes from PRDs with a ghost-user cursor, ~20 h → ~30 min), AutoFigma (no-code Figma automation with a smart-wait sensor, 5×), UX Makeover (an interactive AI dojo with hell-UI simulations, ~16 h → ~5 min), Atlas Engine (research structuring with an anti-hallucination veto, ~15×), and Opus Engine (captivation-first bilingual documentation, up to ~52 writing hours saved per project).
- Closing message: "Stop Working Harder. Start Building Smarter."

Sprint review — "How We Built the Brain" — PT Elabram Systems

- The design-system → AI pipeline story in five parts: how design work evolved (Raw UI → Design System → AI Generates UI), the new workflow (Design System → JSON rulebook → AI + Figma plugin → generated UI), why precision needs structure — not just prompts, one JSON with two synced outputs (Figma design and frontend code), and why UX still decides whether people actually use what AI builds.
- How the brain was built: mapping the Figma API → tokens & variables → component + content JSON with rules → one knowledge base → a custom AI with a dedicated system prompt → generating UI straight into Figma via script.

Driving team-wide AI adoption — PT Elabram Systems

- Colleagues' recognition of the AI-driven workflow efficiency directly inspired the internal AI Sharing Sessions — training initiated and led for the development team; a regular contributor to AI workshops and structured prototype walkthroughs (incl. a 25-step contract-history presentation).

FRAMEWORKS & METHODS

Framework PRD — "From Visual to Specification"

- A five-phase framework (preparation → visual extraction → structural analysis → specification writing → validation & handoff) converting visual references into complete, buildable PRDs with AI.
- Validated end-to-end on e-PRABU, an integrated budget-plan lifecycle platform: a full 8-module PRD with personas, success metrics, project-lifecycle state machines, and a complete AI-generated documentation suite.

The Three-Gate Feature Evaluation Framework

- Routes every proposed feature through Business Value (essential for ~80% of users?) → UX Complexity (is the flow clear?) → Dev Effort (feasible in one sprint?); start from the MVP and simplify relentlessly — "if it's still complicated for stakeholders, imagine the user."

Progressive Disclosure Diagramming (N-level diagrams)

- Explains complex systems layer by layer — the happy path first, edge cases next, deep dives last; built in Mermaid with a dedicated stakeholder Figma file, applied in production to the E-Systems Contract & Pre-Boarding modules.

The Machine-Readable Design System (JSON + Figma plugin)

- The capstone method: convert the design system to JSON so it is machine-readable and AI-ready; one JSON, two outputs — Figma designs and frontend code — implemented across the development team for pixel-consistent delivery.

Design-ops principles & practices

- Distilled from continuous sprint retrospectives: one master documentation sheet; Figma performance hygiene (slot-based variants, instance-first edits pushed to master, the design system in its own library file); Tailwind + Tabler Icons as design-to-code foundations; ASCII-wireframe ideation and JSON-structured AI prompting; periodic freshness research (squirrel, glassmorphism, progressive blur) with frontend and stakeholders involved early.

PRODUCT ECOSYSTEM

The @alamehan product family — 20 products · 20 executable PRDs — Personal product ecosystem 2026 — now

Live: <https://alamehan.github.io/>

- One shared engineering standard — the Alamehan Project Standard: every product ships as a single self-contained HTML file, zero build steps, zero dependencies — designed, specified, and shipped through a self-built factory (a PRD console with 14 deterministic checks, machine-enforced design parity, a one-command release board).
- The ecosystem forms a design-to-delivery chain — BizVenture → SpecPilot → ProtoPilot → UXMakeover: from venture idea to specification to self-demonstrating prototype to audited UX — bound by a universal family PRD template.
- Every product carries a deliberate identity (emoji, Indonesian codename, accent color, one-line tagline) with documented lineage — the family formally consolidates and supersedes more than a dozen earlier frameworks and tools.

EDUCATION

Bachelor of Informatics / Computer Science — GPA 3.61 — Telkom University Aug 2016 — Feb 2021 · Bandung

- Internship at PT Kong Teknologi Asia, Jakarta — UI/UX.
- Final project: classification of orchid species using convolutional neural networks.

Science — SMAN 1 Cibadak, Sukabumi 2013 — 2016

- President of the Student Council (OSIS) · Head of the IT Club.

CERTIFICATIONS

Microsoft UX Design — Coursera Sep 2024 — now

Google UX Design — Coursera Dec 2023 — now

UI UX Mastery — Habiskerja Mar 2023

UX Designer — Skillacademy by Ruangguru Mar 2020

SKILLS & TOOLS

Design

- User interface & user experience design · web & mobile app design · design systems · wireframing · prototyping · user flows · responsive design · usability testing · interaction & visual design · design thinking

AI-augmented design stack

- Claude · Gemini · ChatGPT · Notion AI · NotebookLM — JSON-structured prompting and ASCII-wireframe ideation; Figma API & Figma Agents · machine-readable JSON design systems · custom Figma plugin development · slot-based component architecture · no-code design automation

Diagramming, motion & prototyping

- Mermaid progressive N-level diagrams · cinematic diagram animation · SVG animation systems · AI motion systems · 60 FPS video handoffs · single-file HTML self-demonstrating prototypes with ghost-cursor virtual users · state-machine-driven demos

Tools & code

- Figma · Sketch · Adobe XD · Photoshop · Illustrator · Zeplin · Jira · Trello · Notion · Miro · Slack — HTML · CSS · JavaScript · Tailwind · Bootstrap · WordPress — DESIGN.md coding-phase guidelines

INSIGHTS

- Motto: "Arete" — striving to fulfill one's fullest potential in every role · INTJ, "The Architect" — strategic, independent, systems-oriented.
- Character strength: Appreciation of Beauty & Excellence — valuing quality, craft, and skilled performance in every domain; stays current through UI/UX communities, design-system references, and daily AI/design/engineering newsletters.
- "I don't just build things that work. I bleed through endless iterations to forge absolute masterpieces."
